User Manual:

- X.GamePad Mode:** Only Android 3.2 + versions supports this mode. When the handle is turned off, first press the "X" key, then press the HOME key. Bluetooth LED indicator flash. The handle enter into the pairing mode and turn on the phone and search Bluetooth devices "Ipega Extending Game Controller" for pairing. LED indicator light is on after the successful pairing.
- A.Keyboard Mode:** (For Android system and support various types of simulators) When the handle is turned off, first press the "A" key, then press the HOME key. The Bluetooth LED indicator flash and the handle enter into pairing mode. Turn on the phone and search Bluetooth devices "Ipega Extending Game Controller" for pairing. LED indicator light is on after the successful pairing.
- B.iCade modes:** When the handle is turned off, first press the "B" key, then press the HOME key. The Bluetooth LED indicator flash, and the handle enter into the pairing mode. Turn-in the phone and search for Bluetooth devices "Ipega Extending Game Controller" for pairing. LED indicator light is on after the successful pairing.

Y. Y key has two modes: 1. SPP Mode (for systems with virtual keys of the game), 2. ipega gaming desktop (see appendix)

1. SPP Mode: When the handle is turned off, first press the "Y" key, then press the HOME key. LED lights flash and the handle enter into the pairing mode. If the pairing is successful, the LED indicator is keeping bright. The handle is in the SPP mode; SPP mode requires corresponding Android APP software to complete the relevant key mapping function.
 SPP use:
 1 Go to Settings → Language and input → Select Input Method "GHTouch IM" (Figure 1)
 2 Open the application "GHTouch" → Choose device "ipega Extending Game Controller" → check "virtual screen buttons" → Select Input Method "GHTouch IM" → The device will automatically connect with the handle, after the connection is completed, the LED indicator light (Figures 2, 3)
 3 After entering the game, press the volume up on the device or handle "Select" button, the button icon onto the screen corresponding to the position (Note: Double-click the icon to set the size), press return or click on the device handle "Select", icon hidden, complete the setup.

About input method setting: Using the controller to play game should set the phone or notebook input method to be default as English language input (For the ios system, be sure to switch the input method, and then pairing. If not, the handle does not work properly.)

Charging controller: Accessing the controller to 5V power supply for charging (PC device or mobile phone power adapter). **In the process of charging, the charge indicator light of handle is orange and LED is off after fully charged.**

Switch on/off the controller: Press "HOME" button for 3 seconds until the Bluetooth LED is off, it means shutdown is successful. If the phone is not unpair connection when controller shutdown. Just do it again
Press the "HOME" button for about five seconds, until the LED red light flashes slowly. It means that the handle is turned on (the default the last boot mode), the boot handle will automatically paired with the phone connection. If the connection fails, the handle will automatically shut down.

Connect the PC: Open the device's Bluetooth PC program, and select the "X, A" in either mode can be paired with (and does not have a Bluetooth PC devices need to use the Bluetooth receiver).

Note: To change the controller function mode, please turn off the controller firstly and cancel the bluetooth pairing, then in accordance with the operation mode to replace the steps.
